

# END STAGE RENAL DISEASE MEDICAID COST RECOVERY

## Opportunity:

A Michigan Medicaid Health Plan was paying significant reimbursement for high-cost claims for members with ESRD that could be eligible for Medicare benefits.

## Resolution:

After Advomas thorough investigation, it was determined that many of the members would be eligible for Medicare, and they assisted with securing approval for them through the Social Security Administration (SSA). An impressive **52% of cases referred were transitioned to Medicare by Advomas**, many of them retroactively due to appealing previous erroneous denials by the SSA, resulting in recoupment of many previously paid claims and allowing for future cost avoidance to the plan. **In the first 12 months, the plan was able to recover \$1,018,000 in claims. And within 48 months from referral to the end of the project, a total recovery of \$3,219,639 was realized by the plan.**

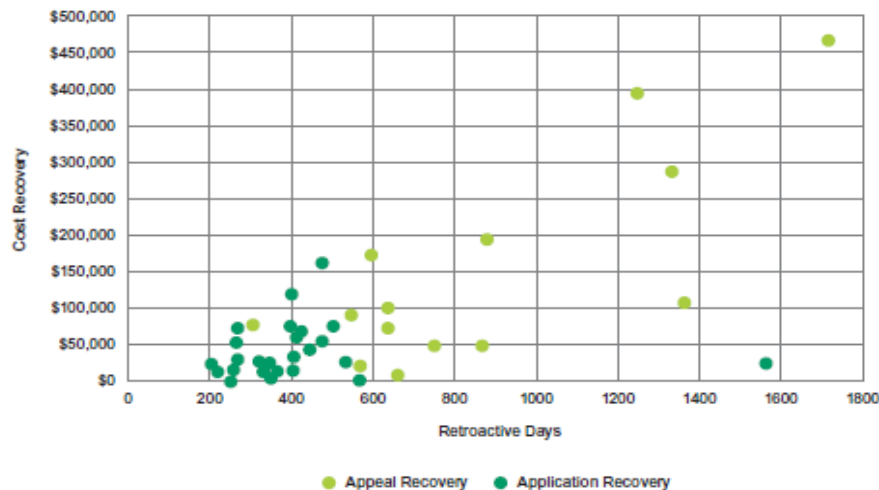

### Service

#### Differentiator:

Roughly **32%** of these members were initially denied by SSA for coverage. With member consent, Advomas representatives identified errors with initial application, managed an appeal with SSA and secured coverage through Medicare.
